

Solco sustainable water and power solutions

100%
solar

Solco Ltd produces solar power and pumping systems for a broad range of environments and requirements.

Growing Solco

Solco began in 1989 as Solar Energy Systems. The combination of Solar Energy Systems' low-maintenance Sun Mill water pump and Sun Tracer solar tracking device formed the basis for a solid market in remote water applications. Solar Energy Systems listed on the Australian Stock Exchange in December 2000. Its distribution network grew quickly and in 2004 Solco Industries was acquired.

Solco Industries produced innovative solar hot water systems that were entirely polymer-based, promising increased lifespan and reduced maintenance for roof-mounted hot water systems. Trading on the value in global licensing under the Solco name, Solar Energy Systems changed its name to Solco Ltd. at this time.

In March 2005 Solco purchased Choice Electric, one of Australia's largest, oldest and most respected distributors of solar power systems and components, operating in Australia and the Pacific region.

Solco today

Today our main operations are in the wholesale and distribution of solar power and pumping solutions around Australia and overseas, supplying a combination of imported and locally-sourced products. We cater for corporate and government clients directly, and residential customers through our installer network. Our brands include GridPower™, Choice Electric, Solar Energy Systems, Sun Mill™, Solartech Genius™ and Solco Manufacturing Systems.

Our products include complete solar power (photovoltaic — or PV) and small wind energy systems, individual components for grid-connect and stand-alone applications. We also supply a range of affordable and reliable solar pumping solutions to handle the toughest of remote water needs, suitable for irrigation, livestock watering, ponds, islands, remote homes and cabins.

Solco has investments in hot water system manufacturing, and solar infrastructure project management. We also have a demonstrated capability to develop and manage infrastructure projects in developing countries, as well as in Australia. Often in collaboration with international aid organisations and financiers, Solco provides management across the full scope of project activities — from pre-project analysis through to system design, procurement and ongoing maintenance.

We are a publically-owned company, listed on the Australian Stock Exchange under the ASX code SOO, and directly employ over 30 people in Australia.

- Complete PV and small wind energy systems
- Individual components for grid-connect and stand-alone applications
- Affordable and reliable solar pumping solutions
- Solar infrastructure project management
- Solar hot water system manufacturing
- Local and global wholesale and distribution

Our partners

Our business partners work with Solco to provide smoothly integrated solutions for customers, whether its the provision of basic parts and equipment or the installation of a complete system. In turn, Solco provides dealers with training and technical updates as well as marketing and commercial assistance.

Our supply chain leverages the quality and service of the best manufacturing companies. From Sharp solar panels through Shurflo submersible pumps to Fronius inverters, every component of a Solco system must be of the highest quality to satisfy the demanding needs of remote locations and an often harsh environment.

Our footprint

The connection between fossil fuel energy and climate change is gaining widespread recognition, and it is not just good enough for renewable energy companies to produce and distribute systems for others to use, we also must do our part to lower our carbon footprint.

In our operations, we mitigate our carbon footprint through the implementation of energy efficiency measures in our warehouses and offices, and generating solar electricity on our available roof space. Indeed, over half our employees also have installed our GridPower systems on their homes.

We employ a “reduce, reuse and recycle” policy throughout the company, and print on FSC-certified paper.

We are constantly revising our operations, in line with our aim of being the most sustainable solar power and water company in Australia — economically, socially and for the environment.

Our locations

Our headquarters and solar pumping operations are in Perth; main wholesale and distribution operations are in Brisbane; and we have sales offices in Northern NSW and Melbourne.

The Solco dealer network extends to almost 400 locations across Australia and internationally. The dealership network is continually growing, with new dealership opportunities available to businesses willing to serve Solco's national customer base.
